Preparing for my maths final

Sample · a 12 week plan · almost-there.eu

In twelve weeks you will be ready for your maths final: every topic sorted, the gaps closed, and four full past papers behind you.

HOW YOU WILL PROVE IT

You sit a whole past paper, timed, unaided and without looking anything up — and mark it yourself.

WHAT THE PLAN ASSUMES

· Six hours a week, mostly after school

· Functions and equations are fine, solid geometry is the weak spot

· One day a week is off

Week 1 — Find out what is actually missing

1/11 – 1/17

Every topic is in one of three piles: can explain it, recognise it, never seen it.

Monday, 1/11

No studying today. Sorting.

- [ ] Print the official topic list for your exam — 10 min
- [ ] Go through the first ten topics and note whether you could explain each one out loud — 45 min

Tuesday, 1/12

The second half of the list.

- [ ] Sort the remaining topics the same way — 45 min
- [ ] Order the “never seen it” pile by how many marks each is worth — 20 min

Thursday, 1/14

The first gap, the hardest one.

- [ ] Solid geometry: volume and surface area of solids of revolution, read and summarise in your own words — 50 min
- [ ] Five volume problems, no calculator — 40 min

Week 2 — The hardest gaps, while there is time

1/18 – 1/24

You can explain solid geometry out loud and solve a standard problem without looking up formulas.

Monday, 1/18

Conic sections from scratch.

- [ ] Circle and ellipse: derive the equations rather than memorising them — 50 min
- [ ] Eight problems from last year's papers — 45 min

Wednesday, 1/20

Checking it held.

- [ ] Explain solid geometry out loud as if teaching it — no notes — 20 min
- [ ] Whatever you could not explain, look up and try again — 40 min
